introducing
**compounding
podules™**

Podtech™ is a biopharmaceutical factory system that is pre-engineered, pre-fabricated, and pre-validated for easy mobility. It is designed for the production of high-value, low-volume, and high-tech products.

The system is built using several container-sized podules™ that are assembled at our factory, complete with process equipment, internal infrastructure, and utilities such as cleanroom, air, water, and fire protection.

Compounding

combines, mixes, or alters ingredients to create a medication tailored to a critically ill patient's unique needs.

Drug compounding

serves a critical patient need as an alternative for patients with allergies to specific ingredients or for elderly or chronically ill patients.

Optimise patient outcomes

You can now have your compounding lab up and running within 12 months with our **compounding podules™** from Podtech™

Specs

The compounding podule™ comes fully equipped with cleanroom equipment (Dynamic Passbox and SS Sink, lab furniture (workbench and cabinet) and vinyl flooring. Utilities are European while the air handling system is Japanese tech.

The environment is humidity-and temperature-controlled, with stringent inbuilt quality control measures. The cleanroom is made with fire rated modular partitions.

Every podule™ is all weather proof with a seismically designed, reinforced steel structure, a modular prefab construction and vinyl flooring.

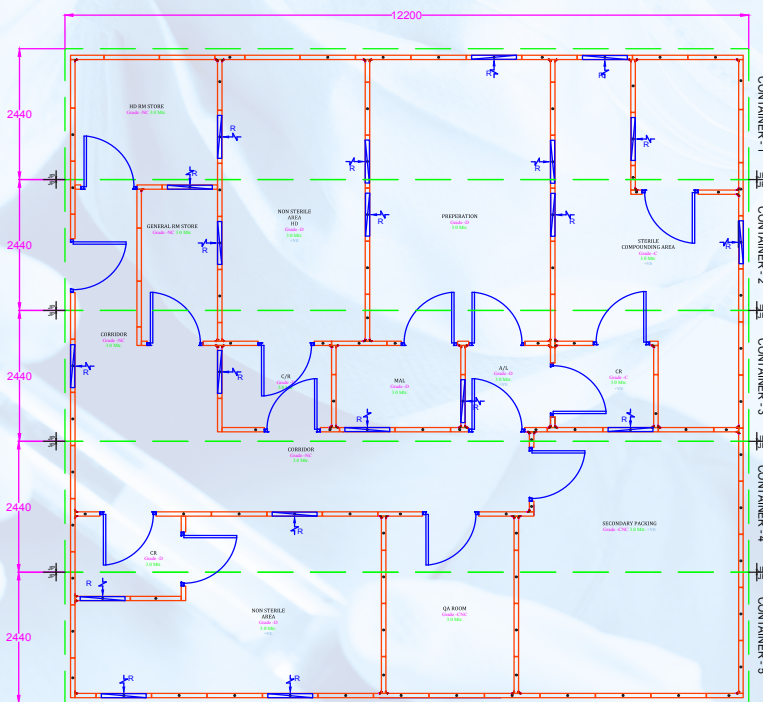

Inclusions

- Air handling & HVAC system
- Automation
- Project Management
- Factory Acceptance Test
- Site transfer
- Site Acceptance Test
- Validation and Documentation

YOUR RESPONSIBILITIES

Free land with boundary wall and plinth or hospital roof

Up and running in 12 months
